

pedicure copper bowl

CLEANING & MAINTENANCE

Please note that oxidization is a natural process when metal comes in contact with water, especially salty water. We, therefore, recommend following precautions:

- The brass or copper vessel is washed with fresh water after every use.
- Towel dry your foot wash bowl or sink to prevent water spots.
- Regularly apply wax at the end of the day to prevent oxidization and have long lasting finish.
- We don't recommend citronella cleaning products, lemon oil, straight bleach, any strong cleaning agent or Barbicide.
- You can use mild bleach solution (1-part bleach and 3 parts water) or hospital grade disinfectant to clean them.

Metals will always react with salty water and other chemicals hence we would not be able to offer any warranty for foot washing uris and foot wash sinks for any discoloring or corrosion happening during usage. Proper maintenance, as mentioned above will be helpful to prevent corrosion and have long lasting finish.
